

ABSTRACT OF THE DISCLOSURE

A combined structure of a front part of a cabin of an automobile has a dash panel and a front pillar.

The dash pane is placed in the front part of a cabinet,

5 extending in the width direction of an automobile, and forms a tire house bulged toward the inside of a cabin under both left and right sides. The dash panel has a panel flange extending rearward of vehicles from the proximal end of both edges. The front pillar is formed

10 by a front pillar inner and a front pillar outer joined in pillar flanges where they are faced each other in the width direction. In the front pillar, the pillar flanges in the forward of vehicles are joined to the panel flange. The front ends of the pillar flange is

15 located more rearward of vehicles than the proximal end.
